

First, in Google Chrome, open an **interior page** of the food bank web site you have chosen for your analysis. Then complete the following questions in a separate Word document. (Number your answers, but you don't need to copy the questions. When complete, submit this file to the Georgia View "Site Structure" drop box.)

1. What is this interior page's URL? (Copy and paste a working link to the page.)
2. Does the site follow the *Web Style Guide's* recommendations for folder and file names? (This should be obvious from the page's URL.)
3. Is the page's title descriptive and precise? Is it unique, or could the title be used on a number of other pages?

**Examine the page's HTML code to answer the following questions. In Google Chrome, use "View > Developer > View Source" to reveal the page's code.**

4. How many style sheets does the page use?  
(Use "Edit > Find" to search the page for the keyword `stylesheet`. Don't include the period.)
5. Does it use javascript?  
(Use "Edit > Find" to search the page for the keyword `<script`. Include the open bracket `<` but not the period.)
6. If it uses javascript, how many scripts are included in the HTML document?  
(Use "Edit > Find" to search the page for the keyword `<script>`. Include the open and close brackets `<>`, but not the period.)
7. How many div tags are included in this page?  
(Use "Edit > Find" to search the page for the keyword `<div`. Include the open bracket `<` but not the period.)
8. If the page uses div tags, does it use semantic names for the id's and/or classes included inside each div tag? Give examples of the names used.
